

Geography Y11

Term	1	2	3	4	5	6
Topic	Urban Issues and Challenges - Urban Change in the UK	The Challenges of Resource Management - Resources and Energy	River Landscapes	Revision - Natural Hazards and Urban Issues	Revision - Changing Economics and the Living World	Exams
Detail	Key idea: Urban change in cities in the UK leads to a variety of social, economic and environmental opportunities and challenges. Students will study a case study of a UK city in detail and examine an example of an urban regeneration project.	Key idea: Food, water and energy are fundamental to human development. Students will examine the significance of food, water and energy to economic and social well-being. An overview of global inequalities in the supply and consumption of resources.	Key ideas: The shape of river valleys changes as rivers flow downstream. Distinctive fluvial landforms result from different physical processes. Different management strategies can be used to protect river landscapes from the effects of flooding.	Focussed Revision will take place during lessons to reinforce understanding of the tectonic and weather hazards, climate change and urban issues and challenges.	Focussed revision will take place during lessons to reinforce understanding of the development gap, newly emerging economies, the UK economy, hot deserts and rainforests.	
Grade 8-9	To be able to analyse and a range of points while making connections between ideas such as how urban change can affect social and economic opportunities.	To be able to analyse and a range of points while making connections between issues such as the impact of energy insecurity and the sustainable production of energy.	To be able to analyse and a range of points while making connections between issues such as the erosion of fluvial landforms and the management of floods in the UK.			
Grade 6-7	To be able to explain and analyse the majority of points in relation to social, economic and environmental aspects of urban change. They should also be able to analyse the strategies for reducing the associated environmental impacts.	To be able to explain and analyse the importance of energy security in the development of a nation. They should also be able to analyse the strategies needed for developing a sustainable energy supply.	To be able to explain and analyse the majority of points in relation to fluvial processes and the factors that increase the risk of flooding. They should also be able to analyse the strategies needed for managing floods in the UK.			
Grade 5	To be able to explain in detail, most social, economic and environmental impacts of urban change. They should also be able to explain the strategies for reducing the associated environmental impacts.	to be able to explain in detail, the importance of energy security in the development of a nation. They should also be able to explain the strategies needed for developing a sustainable energy supply.	to be able to explain in detail, fluvial processes and the factors that increase the risk of flooding. They should also be able to explain the strategies needed for managing floods in the UK.			
Grade 4	To be able to give detailed descriptions of and begin to explain the social, economic and environmental aspects of urban change. They should also be able to describe the strategies for reducing the associated environmental impacts.	To be able to give detailed descriptions of and begin to explain the importance of energy security in the development of a nation. They should also be able to describe the strategies needed for developing a sustainable energy supply.	To be able to give detailed descriptions of and begin to explain fluvial processes and the factors that increase the risk of flooding. They should also be able to describe the strategies needed for managing floods in the UK.			
Grade 2-3	To have some knowledge of and to describe some of the social, economic and environmental aspects of urban change.	To have some knowledge of the global distribution of resources and its importance in developing a country.	To have some knowledge of and to describe some aspects of erosional and depositional features of a river.
